

Carbon Dioxide (CO₂) is used on Class B (flammable liquid) fires.

CO₂ is extensively used throughout the food industry for its cleanliness in application.

Carbon Dioxide extinguishers are available in a variety of sizes with steel cylinders for most applications.

SAFETY:
CO₂ can burn the skin if extinguisher is held incorrectly.

We recommend that all personnel are trained in the operation of portable fire extinguishers for their own safety and to maximise the effectiveness of the extinguishant.

CO₂ extinguishers are identified by the unique coloured hose, designed to TS EN 3.
